Measured efficiency.
Monitored to the minute.

PRODUCTION

clearVISION Insight™ provides continuous, up to the minute tracking and assessment **of manufacturing processes establishing** benchmarks to ensure optimal production outcomes.

TIME

ALARMS
DOWNTIME/
FAULTS

clearVISION Insight™ provides tracking to minimize losses of time and materials, to achieve efficiency:

- Target measures by day or by shift
- Minimize cost overruns
- Reduction of overtime costs

- Improved production scheduling and planning, forecasting
- Optimizing production performance with real-time feedback of cycle time
- Ensure complete fulfillment of orders and retain customer satisfaction

Improve production

Sectors:
- Automotive & Transportation
- Food & Beverage Production
- Agricultural
- Consumer Goods

Production Gauges:
- Production / Batch count
- Cycle time metrics
- Downtime analysis

Examples:
- Overall line or equipment efficiency (OEE)
- Process improvements
- Downtime tracking for root cause analysis

Capturing machine downtime generates pareto for the resulting causes of downtime, altering to correction action required. *The Pareto Principle – 80% of consequences arise from 20% of causes – implying an unequal relationship between inputs and outcomes.*
